

Clinical Protocol

Pseudoaneurysm

1. Image common femoral artery (CFA), superficial femoral artery (SFA), common femoral vein (CFV), and greater saphenous vein (GSV) long with color Doppler and velocity measurements.
2. If pseudoaneurysm found, image in trans with B-mode and measure diameter in AP and left-to-right. Color Doppler image of pseudo and waveform in pseudo and neck area.
3. Image pseudo in long with B-mode measuring superior-to-inferior, and color Doppler of pseudo and neck.

Document with B-mode, color Doppler, and waveforms any AV fistulas.
