1. Pre-procedure gray scale image in 2 planes of lesion/body part to be sampled/manipulated.

2. Pre-procedure color image of lesion/body part to be sampled/manipulated.

3. Intraprocedure - One image per sample/biopsy/manipulation with needle present.

4. At least one image of lesion/body part post-procedure.

Remember to screen for blood thinners and to monitor vital signs pre- and post-procedure, when applicable.

Remember to perform the Pre-procedural Pause: Verify patient, date of birth, procedure, and laterality (when applicable).
